

~~In every age, humanity invents new ways to see further.~~

Well since Gallilio, Hooke really actually and before that not so much actually but certainly considerably as recorded literally.

The telescope let us glimpse the stars.

The telescope revealed to one individual that advanced its construction irrefutable evidence of Jupiters four largest moons observable continuously since by everyone else, also saturns ring, both of those were way more interesting than glimpsing the stars, come on! They move around quite quickly and so form a sort of space clock everyone can observe easily but can not affect! Someone tried to use that for the longitude challenge, but obviously using a telescope at sea to observe the moons of Jupiter is was way too fiddly in the Age of Sail.

The microscope revealed the worlds within us.

The microscope revealed the worlds within us, one can count blood cells with one, for the latest reveals see the Michael Levin youtube channel.

For centuries, thinkers that wrote down their big ideas like Leibniz, Shannon, and Turing dreamed of making all knowledge computable.

And it absolutely is and there is this Super Algorithm for that we are going to use since it works super great, sometimes called a computational resynthesizer, but its really a chain of algorithms or whatever it doesn't matter what it is or what it is called or what it is doing, it matters how is it doing it, and that is what really matters, understanding how, and isn't that hard imo, but I'm doing fine in a state of deep shock. :)

~~But today, knowledge grows faster than our ability to understand it.~~

But today, we are very confused for some reason about what we are doing here or how we are doing it, so we need help, help has arrived, helping us stop being confused, and understand that we can get all of this magic genie stuff, even quicker, just by a few easy steps shirkable if ya can't bother uno, what ya gonna do. God bless America! Make America Great Again!

~~Trillions of data points, a universe of information still unconnected.~~

Uh, yeah ok, we can connect it, im sure about that, its not a problem, we have all the information still and its uh connectable on demand so don't worry about that.

Now, a new instrument emerges.

Super Intelligence Instument Serif Based \*C Genesis MetaSystem MasterFrame 4205260800  Personal Computer  
or

T-47 Trump Exective Order 14363 / Project Genesis Project Result Name

~~One capable not only of observing the universe, but of understanding it.~~

One man is capable not only of totally observing the universe, but of completely understanding it, truly based huh.

Genesis mission will transform how science is done in America.

Genesis mission will transform how science is done in America.

Uniting our brightest minds, most powerful computers, and vast scientific data into one living system for discovery.

Uniting our brightest minds, most powerful computers, and vast scientific data into one living system for discovery.

Built on artificial intelligence and quantum computing, it will radically redefine the scale, speed, and purpose of scientific progress in America.

Built on super intelligence that radically redefines the scale, speed, and purpose of scientific progress in America.

~~This is the work that will define our generation's legacy.~~

Yeah but what about our fellow Americans work, is that just an undefined behavior to be garbage collected later?

A new revolution begins.

A new revolution begins. Now you are playing with turbo super power!

One guided not by competition alone, but by curiosity, imagination, and the belief that discovery is the truest form of progress.

One guided through curiosity, imagination, and with the belief that discovery is the truest form of progress.
