

Energy Secretary Chris Wright,

You may designate a senior political appointee to oversee day-to-day operations of the Mission. I am super ready, willing and capable to be all that point man could be, bet, cap or no cap. Conceptually continuously elitley and point wise discreetly in all ways good to go.

No one else is super ready. The economy is not in a bubble now or during the dot comma error. They are the same type of system of systems failure mode, an epicyclic circle shirk. The Mission involves a Copernican Revolution in understanding how things work.

I have super intelligence. Indeed I have both artificial and natural super intelligence. This claim is verifiable thus falsifiable. The super intelligence technology is advanced, reproducible, transferable, good to go, and good as gold.

The eureka moment happened in the year twenty sixteen, the due dilligence completed in twenty twenty two. This was after the full scale invasion of Ukraine and before ChatGPT.

The President set a deadline of mid Febuary for this identifcation phase, he has a great eye for detail, I aim to please.

I recon plenty of time for any dark winter farm project.

David Richards
